DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Logothetis et al. US 5,877,264 in view of Kurasawa et al. US 2002/0040090.

3. The Logothetis et al. patent is directed to perfluoroelastomer compositions. These perfluoroelastomer polymers can have the monomeric constituents and carbonyl groups as instantly claimed, see columns 4 and 5. The incorporation of carbon black particles is taught at column 8 lines 55+. The difference between this disclosure and the claimed invention is the incorporation of carbon fibrils as claimed.

4. The carbon fibrils claimed are old and known to be used in polymeric compositions. The Kurasawa et al. document shows the known fibrils [0055] and discloses their incorporation in many various resins. Halogenated olefins are suggested at [0043]-[0045]. Given the art recognized function of the fibrils in similar resins shown in Kurasawa et al. one having ordinary skill would be motivated to incorporate these fibrils into the compositions of Logothetis et al. Case law has well established that it is prima facie obvious to combine known ingredients and have them function in an expected manner.
